
Spend less time in braces.

With SureSmile, patients spend less time in treatment and make fewer visits to the orthodontist. The custom SureSmile archwire provides smoother movement for a more comfortable experience than traditional braces. And, by quickly returning to a normal oral hygiene routine, maintaining healthy teeth and gums is easier.

Your orthodontist
can see teeth
like never before
with SureSmile.

Imagine yourself
with a beautiful, healthy
smile next year.

suresmile®

SureSmile.[®]
The advanced
orthodontic
treatment that
will have you
smiling sooner
than you thought
possible.

With SureSmile, your
doctor delivers the
most precise orthodontic
treatment available.

No other
orthodontic treatment
provides the
accuracy of SureSmile.

Precision never before possible.

SureSmile[®] was developed specifically for
digital orthodontic treatment.

A 3-D model of your teeth allows
your bite to be seen from any
angle. The orthodontist uses the model
and SureSmile computer simulations
to determine the best treatment plan.

Once the doctor finalizes your
unique prescription, SureSmile calculates
the most efficient movement for
each tooth, to create the beautiful, healthy
smile you've always wanted.

The secret of SureSmile is
its revolutionary technology.

Instead of the doctor bending an archwire
by hand, a SureSmile wire is custom-
shaped by a robot. When the wire is
inserted, each tooth moves directly
to the prescribed position. It's this precise
movement that enables such great
results with a shorter treatment time.

Robotic technology
creates a custom archwire
according to the
doctor's treatment plan.
